

NOTICE TO CUSTOMERS AND RESELLERS

Dear,

We would like to inform you that the rope diameter range on our series of rope clamps recently changed from 8 mm - 13 mm to 9 mm - 13 mm. This change only affects diameter range specification for the mountaineering norm EN 567 but not the specification for the norm EN 12841. The measure is due to achieving consistency in one of the norm test requirements. It may be pointed out that 8 mm ropes do not qualify as neither low-stretch ropes nor single dynamic ropes. In this respect, they are not fit for safely supporting a full person weight.

OBVESTILO STRANKAM IN PREPRODAJALCEM

Spoštovani.

Želimo vam sporočiti, da se je interval premerov vrvi na naši seriji vrvnih prižem spremenil iz 8 mm - 13 mm na 9 mm - 13 mm. Sprememba zadeva le standard za gornišstvo EN 567 ne pa tudi standard za delo na višini EN 12841. Ukrep je usmerjen v doseganje konsistence pri eni izmed preizkusnih zahtev standarda. Lahko bi izpostavili, da vrvi s premerom 8 mm ne morejo biti niti vrvi skladne s standardom EN 1891 za vrvi z majhnim koeficientom raztezka niti enojne dinamične vrvi. Zatorej v vlogi sidrne vrvi niso primerne za varovanje oseb.

Izola, 5. 10. 2017.
